

How to Install Presets in Lightroom Classic, Lightroom CC, and Lightroom Mobile

Thank you for purchasing RealAnalogFilm Presets! Here are the instructions on how to install them:

Install Presets in Lightroom Classic:

1. Open Lightroom Classic and go to the Develop module.
2. In the left-hand panel, find the Presets section and click the + button to create a new preset folder. Give it a name and click Create.
3. Right-click on the new folder and select Import.
4. Navigate to the folder where the preset files are located.
5. Select the preset files and click Import to add them to the new folder.

Install Presets in Lightroom CC:

1. Open Lightroom CC and go to the Edit module.
2. In the right-hand panel, find the Presets section and click the three-dot menu icon.
3. Select Import Presets and navigate to the folder where the preset files are located.
4. Select the preset files and click Import.

Install Presets in Lightroom Mobile:

There are two ways to install presets in Lightroom Mobile: via desktop sync or direct import.

To use desktop sync:

1. Install the presets in Lightroom Classic or Lightroom CC.
2. Ensure that your desktop and mobile apps are signed in to the same Adobe account, and that syncing is enabled.
3. Sync your presets with Lightroom Mobile.

To directly import presets:

1. Open the Lightroom Mobile app and go to the Edit module.
2. Tap the Presets button at the bottom of the screen.
3. Tap the three-dot menu icon and select Import Presets.
4. Navigate to the folder where the preset files are located, select the preset files, and tap Import.

That's it! You can now use your newly installed RealAnalogFilm Presets.
